

Operating and Maintenance Instructions

SOG® + SOG®II - Type 3000A | for all Dometic CT3000/CT4000

<p>1 Before removing the cassette, the hose must be pulled off the green hose connector.</p>	<p>2 Attach the black plug to the hose connector (green). Pull out the cassette and dispose of it appropriately.</p>	<p>3 Insert cassette, pull off plug (black), and attach the extractor hose onto the hose connector (green).</p>	<p>4 If you want to change a second cassette, then you can carry the full cassette in the storage space for several days. (There is no longer any gas formation if the cassette is full)</p>

Only by door version: Change the filter once a year!

<p>1 Completely unscrew the 2 crosshead screws at the bottom.</p>	<p>2 Push the cover cap up a little and remove at the front.</p>	<p>3 Take out the filter and insert a new filter into the existing fitting.</p>	<p>4 Place cover on the top - pull it forwards slightly at the bottom. Push the cover from top to bottom so that it locks into place. Screw in screws ① and tighten slightly. Apply a light pressure on the cover while doing so.</p>

Only by floor version: Change the filter once a year!

- ❶ Before changing the filter, pull the fan out of the rubber sleeve in the filter housing.
- ❷ Since the filter cartridge push-fits into the pipe, twist it back and forth while pulling it upwards and out.
- ❸ Insert the new filter cartridge into the pipe.
- ❹ You must moisten the rubber sleeve before inserting the fan into the filter cartridge.
- ❺ Insert the fan as far as it goes, twisting it back and forth.

By roof version: maintenance-free
